

# Cisco 860VAE Series Integrated Services Routers

## Product Overview

The new Cisco® 860VAE Series Integrated Services Routers (ISRs) are part of the Cisco Integrated Services Routers Generation 2 (ISR G2) portfolio. Cisco 860VAE routers support Gigabit Ethernet (GE) or very-high-speed DSL 2/asymmetric DSL2+ (VDSL2/ADSL2+) on a single, fixed ISR. The Cisco 860VAE Series can provide cost-effective basic or secure wired or wireless connectivity for a casual or enterprise teleworker as well as serve as managed customer premises equipment (CPE) for service providers.

## Features and Benefits

Cisco 860VAE Series ISRs are entry-level, fixed-configuration routers that serve a range of business needs from providing basic connectivity for the casual teleworker to providing secure collaboration for the enterprise teleworker. For service providers, the Cisco 860VAE ISRs present an opportunity for tiered basic or secure managed CPE devices. With multiple WAN technologies offered within a single box (GE, ADSL2+, or VDSL2), the Cisco 860VAE, which shares a common architecture across its variants, allows for consistent management across various deployment scenarios. The Cisco 860VAE ISRs that come in a compact fanless desktop form factor provide improved performance, state-of-the-art xDSL features, and significantly better interoperability over the existing Cisco 860 Series ISRs.

The Cisco 860VAE Series Integrated Services Routers offer:

- Cost-effective basic or secure connectivity with quality of service (QoS) for teleworkers and managed CPE devices for service providers
- Compact metallic desktop form factor featuring a fanless ISR for convenient home or office deployment
- WAN diversity with either Gigabit Ethernet or Multimode VDSL2/ADSL2+ on the same router to span multiple deployment scenarios with common architecture, embedded management, and consistent configurability
- State-of-the-art xDSL features and interoperability and enhanced ISR performance with services
- Four-port 10/100 Fast Ethernet (FE) managed switch for base models with five VLANs; additionally, one Gigabit Ethernet LAN port for the Cisco 860VAE secure routers
- Three 10/100 Fast Ethernet switch ports and two Gigabit Ethernet switch ports in the wireless models with 2.4 GHz 802.11n FCC- or ETSI-compliant wireless LAN
- Secure routers with enhanced security and QoS, including:
  - Border Gateway Protocol (BGP), Low-Latency Queuing (LLQ), and Weighted Fair Queuing (WFQ)
  - Class-based traffic shaping and traffic policing
  - Ten IP Security (IPsec) tunnels
  - Network-Based Application Recognition (NBAR) and Differentiated Services (DiffServ)
- CON/AUX port for console or external modem
- One USB 2.0 port to boot from USB or to load configuration
- IPv6 support on all models

Figure 1 shows a Cisco 860VAE Integrated Services Router, and Table 1 lists the Cisco 860VAE ISR models.

### Cisco 860VAE ISR: Three Functional Types

The Cisco 860VAE ISRs come in three functional types, the base router, which offers entry-level features and basic connectivity, the secure router, which offers advanced security and QoS options in addition to the basic features, and a secure wireless router, which adds wireless LAN connectivity and FlexVPN including site-to-site VPN. Each of these options is available for basic telephone service and ISDN xDSL connections.

## Summary

Cisco 860VAE Series Integrated Services Routers combine increased network performance with advanced security to allow teleworkers to get the most from their broadband connections at a very affordable price. Cisco 860VAE Series Routers can be deployed at any small- or branch-office location, including standalone service orchestration points such as ATM machines or point-of-sale (POS) systems. With the Cisco 860VAE Series, service providers can take advantage of a solution that can be set up easily at a remote site and centrally managed across diverse deployment scenarios. The Cisco 860VAE Series provides excellent value by reducing operating expenses (OpEx) and capital expenditures (CapEx) and hence the total cost of ownership (TCO) while providing the latest connectivity and security features.

## Cisco Services for the Branch Office

Services from Cisco and our certified partners can help you reduce the cost and complexity of branch-office deployments. We have the depth and breadth of experience across technologies to architect a blueprint for a branch-office solution to meet your company's needs. Planning and design services align technology with business goals and can increase the accuracy, speed, and efficiency of deployment. Technical services help maintain operational health, strengthen software application functions, solve performance problems, and lower expenses. Optimization services are designed to continually improve performance and help your team succeed with new technologies. For more information, please visit <http://www.cisco.com/go/services>.
